

LITEON eTDU108

£28 inc VAT

From www.kikatek.com

This is the first portable DVD drive we've seen in ages that can't write discs of any kind. It's designed as an accessory for computers with no built-in DVD drive, such as netbooks.

It comes without any DVD playback software, although the free open-source VLC media player works perfectly well (www.videolan.org/vlc).

The short USB cable tucks neatly away in a right-angled slot on the eTDU108's underside and no external power adaptor is necessary.

Given that portable DVD writers cost only £10 more than the eTDU108, it isn't cheap enough to recommend.
